

PROJECT PROFILE

Amports Benicia is a worldwide leader in Automotive importing and exporting. They are located 16 miles from the Golden Gate Bridge at the headwaters of the San Francisco Bay. Their Deepwater Pier is over 2000 Ft long and sees constant berthing and mooring and was in need of a robust and reliable fendering system for their vessel traffic.

The maintenance team at Amports sought guidance from COWI North America and a solution using (40) "SeaPile" composite Piles at 75' lengths manufactured by Bedford Technologies was proposed and approved.

For more information on the SeaPile material can be found at <http://schraderco.com/wp-content/uploads/2015/06/BED-Brochure-SP-ST-2-12-13-revised.pdf>
